

FQ2 Smart Camera

» Expanded performance and functionality

» Camera, Communications, Software Tools, and Much More

Introducing the Smart Heavyweight

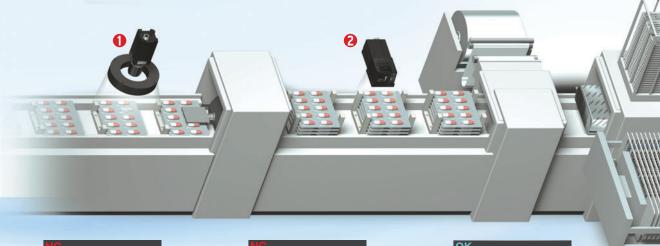

Inspection capabilities, camera options, and communication options -- this powerful heavyweight has it all.

This Vision Sensor provides all of the best-selling features found in high-end models without the need for a separate controller.

This new Smart Camera was designed to entice all potential customers to try out the FQ2 Series.

3 Package Insert Detection

Three Improvements for Smoother Device Design

Compact Body

All in one Vision Sensor

All-in-one compact size that is perfect for use in tight spaces or as an aftermarket option.

Compared to more-advanced Vision Sensors with multiple components, this Sensor boasts a much more efficient hardware design.

» p.04

ExtendedFunctions

Easily Perform Both Inspection and Positioning

This Sensor contains all of OMRON's inspection algorithms in one compact package. Try out the Smart Camera to experience many inspection and positioning features found on more expensive Vision Sensors. There is no need to use different Vision Sensors for different processes, which greatly reduces the amount of time required to select the right Vision Sensor for the job.

» p.06

Diverse Lineup

A Lineup That Fits a Wide Range of Equipment

Expanded inspection menu, camera variations, and communication interfaces with the same pricing level as our previous FQ Series.

This Sensor lineup provides a wide range of options that enables application as a standard image inspection device.

» p.08

Compact

All in one Vision Sensor

All You Need in One Package

Image Processor

Although previous Vision Sensors placed the image processor in a separate Controller, now we have built the processor into the camera unit.

High-power Lighting

The Sensor includes high-power lighting capable of evenly lighting across a wide field of view.

This provides sufficient lighting even when the enclosed polarizing filter is used.

Adjustable lens

The focus of the lens can be adjusted to take clear images for the specific field of view and installation distance you need.

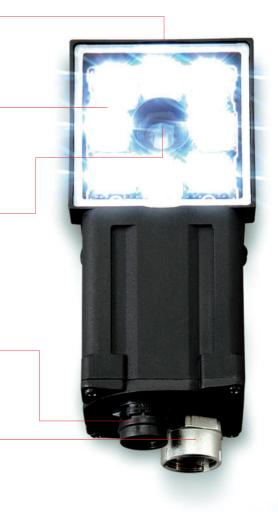

I/O Power Supply Connector

The external output line for inspection results, the input line for changing the setup, and the power supply line are all combined into one connector.

Ethernet Connector

Commands can be input from a PLC to control the FQ2, and inspection results and measurement results can be output from the FQ2 to a PLC.

You can also transfer images to a computer.

IP67 Water Resistance

The sensor still be used in wet

Flexible Cables

All cables from the camera are flexible. This allows the Sensor to be used safel on moving parts.

Smart Click Connectors

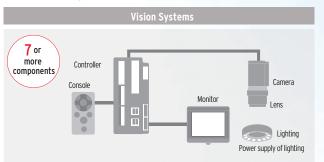

Connection is made quick and easy with a clear, definitive click-into-place mechanism.

Quick and Easy Design and Installation

Easy Product Selection

All you need to do is select the camera based on the field of view and installation distance that you require. There is no need to select and purchase additional lighting or lenses. Furthermore, the time required to wire everything has been drastically reduced due to the low number of components.

Easy Installation

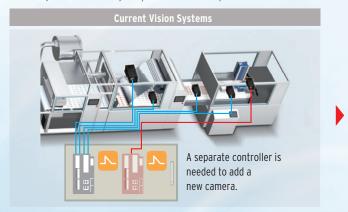

The camera and lighting have been integrated into a single unit, so only one camera mounting bracket is required. The Sensor comes with a multi-directional mounting bracket that can be attached on any of the four sides of the Camera. Axis alignment is also not required because the lighting and the camera are integrated into a single unit.

Easy Expansion Up to 32 Cameras

Just install the Cameras where you need them. No control panels are required to house the controllers. Triggers can be input for each Camera, so new Cameras can be added whenever required without having to worry about timing input design. Up to 32 Cameras can be set up from a single Touch Finder, so you also do not need to worry about adding new monitors when you need more Cameras. This also allows you to smoothly respond to user requests for additional features.

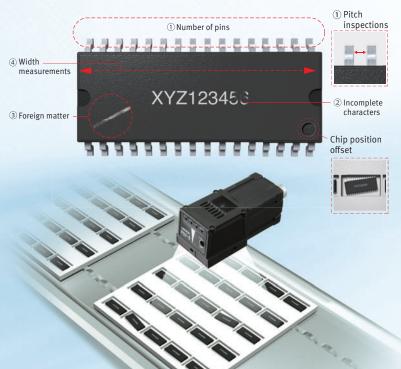

Extended Functions

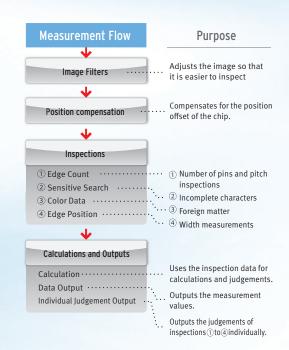

Easily Perform Both Inspection and Positioning

You can combine multiple inspection items to perform external inspections, positioning, and other tasks all from a single Sensor.

External Inspection

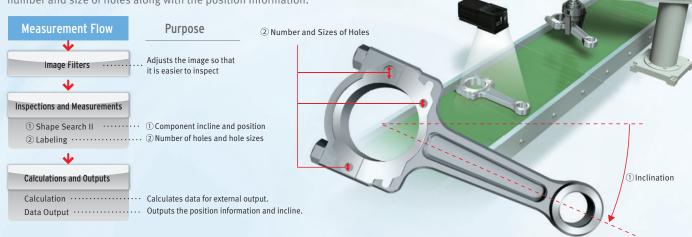

External inspection of ICs can be completed with a single Sensor. The position offset of the entire pallet before inspection can be adjusted on the image itself, which reduces the amount of work required to increase mechanical positioning accuracy.

Component Positioning

The Sensor can measure angles of rotation and other position information, so it can also be used for positioning. Inspections can also be performed for the number and size of holes along with the position information.

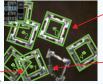

Incorporating the Best-selling Inspection Items from High-end Vision Systems

Searching

Shape Search II Ten Times Faster Than Previous Searching

General searches have a difficult time with overlap or 360° rotation, but this Sensor achieves high-speed, stable searching of any shapes that match the model.

Workpieces are detectable even if there is overlapping.

Workpieces are detectable even if they are rotated up to 360°

Deformed, faulty products are judged as NG.

Multiple searches can be performed simultaneously, which enables the inspection of the number of items in a pallet or picking applications.

Workpieces are detectable even with different amounts of light.

Sensitive Search

Through automatic division and matching of the model image, tiny differences that cannot be detected with a normal search can be detected with large numerical differences.

One character is missing.

Searching

Search

This is a standard search inspection item. This type of search is used to detect items like labels, identify shapes, or positions.

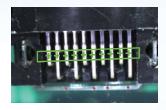

Detection of Promotional Stickers

Edge Measurements

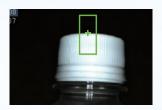

Edge Pitch

The number of edges in a region can be counted.

Edge Position

This inspection item detects edges and measures their positions.

Edge Width

This inspection item measures the width between edges.

Area Measurements, Color Measurements, and Defect & Foreign Matter Detection

Labeling

This inspection item counts how many labels there are of the specified color and size and measures the area or center position of the specified label.

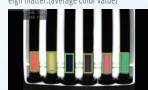

Area

This inspection item measures the area and center position of the specified color.

Color Data

Inspections can be performed that compare the difference in color between the workpiece and a registered image of a good product to detect objects and forcing matter (purpose selection).

You can also inspect for defects and foreign matter by looking at the color deviation.(color deviation)

Utility Items

360° Rotational Position Compensation

The correct position of workpieces with an inconsistent orientation can be measured through automatic detection of the offset of the workpiece in relation to a registered standard model.

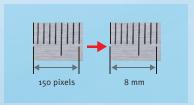

Image Filters

A total of 11 different image filters are provided, including background suppression to help eliminate patterns that can result in unstable measurements, as well as dilation and erosion.

Calibration

If the dimensions or position of a workpiece is difficult to determine in a pixel display, you can convert the display unit so that it is easier to see.

Versatile

A Lineup That Fits a Wide Range of Equipment

Sensor

We offer a diverse lineup of Sensors so that you can choose the one with the perfect field of view and installation distance for your needs.

Integrated Sensor

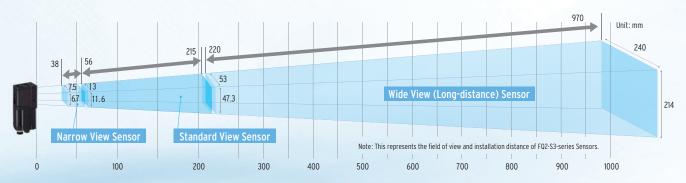

Monochrome

Note:Monochrome is FQ2-S3 Series only.

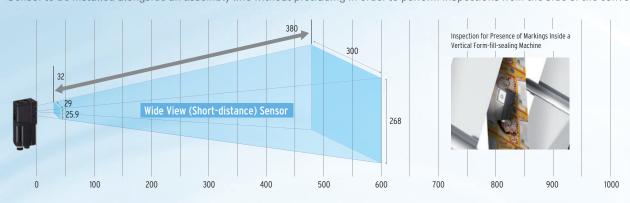

· Seamless Field of View Variations

All-in-one Sensors tend to be limited in field of view variations, but we offer a lineup ranging from 7.5 mm up to 240 mm to meet your needs.

• Wide View Sensors -- Perfect for Tight Spaces

A side-view wide-angle camera takes images and performs inspections across a wide area, even if the camera is close to the workpiece. This makes this type of Sensor perfect for when you need to mount the camera in locations with limited space. This also enables the Sensor to be installed alongside an assembly line without protruding in order to perform inspections from the side of the conveyor belt.

Sensors with C-mount lens

Monochrome

The Sensors with C-mount lens enable freedom of lens selection for long distances over 1 m and narrow fields of view under 1 mm that are not covered by our integrated Sensors. This type of Sensor is also useful when you want to use external illumination.

Long Distance

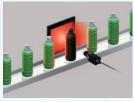

Narrow Field of View

Note: A commercially available telecentric lens is required for narrow field of view applications.

Lighting Examples

Backlighting

External Shape Inspections

Low-angle Lighting

Defect and Foreign Matter Inspections

Communication Interfaces

The Sensor includes communication interfaces for compatibility with a wide range of host devices. This helps reduce the design work required for data communications between the Sensor and a PLC.

wide that a

PLC Link

PLC link greatly reduces the amount of time and work that is required to create ladder programs.

FINS

OMRON's exclusive FINS/TCP communications interface can be used to connect to low-cost OMRON PLCs. With this communications interface, no communications controls are required to process the sending and receiving of complex TCP packets. You get faster, simpler connections to OMRON PLCs.

EtherNet/IP

EtherNet/IP communications, a standard widely used in communications systems in factories around the world, is also supported. This communication interface enables simple and easy connections to a wide range of EtherNet/IP devices, including OMRON PLCs.

I/O Expansion Units

Our expansion units enable expansion to up to three times the number of I/O connections. This enables the output of individual judgement results for each inspection, a feature that has been highly requested.

RS-232C Communications Unit

This Sensor Data Unit supports standard RS-232C communications.

Compatible Models

OMRON PLCs: CS, CJ, and NSJ Series Mitsubishi Electric: Q Series

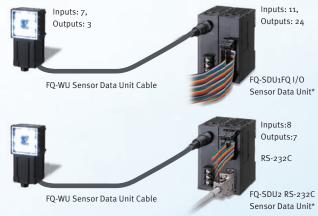

Compatible Models

OMRON PLCs: CP1L Series
OMRON PLCs: CJ Series

Compatible Models

OMRON

NJ-series Machine Programmable Controllers

*.The Sensor Data Units can be connected only to the FQ2-S3 Series.

Setup Tools

We provide two tools for configuration and monitoring of inspection images: the Touch Finder, which can be used onsite to change settings and which can be installed on a control panel, and the PC Setup Tool which can be used from a computer.

Touch Finder

This is a small monitor with a touch panel. It's durable, rugged design is shock-resistant and portable. It has passed our standard 1.3 m drop test.

PC Tool

The Setup Tool provides the same functions as those on the Touch Finder, but on a PC. The software can be downloaded for free by any customer with the purchase of a Sensor. Refer to the member registration sheet that is enclosed with the sensor for details.

Hardware Advancements

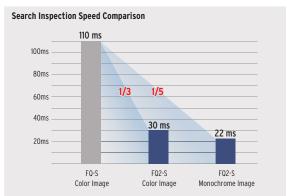

High-speed Image Processor

3X Faster than Previous Models

20 Inspection Items per Second Processing Time

With our new high-speed image processor we are able to achieve a processing time of 50 ms or less for all primary inspection items.

* Processing may take longer than 50 ms depending on the settings.

Note: This comparison was conducted with a 752 \times 480 pixel image, with no rotational compensation.

Partial Input with DAP (Dual Axis Partial) Processing

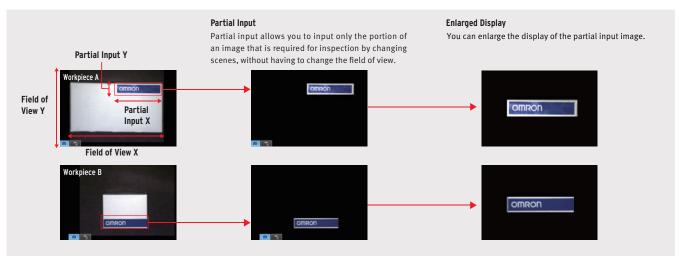

Processing time can be further reduced by limiting the camera input to only the area that is required for inspection. Previous models allowed trimming only in the Y direction, but now you can specify a range across both the X and Y axes for trimming. Keep a wide field of view and trim to only the sections that are required for inspection in each scene to reduce processing time.

[Problems with a Standard Digital Zoom]

Camera input is performed for all images and only a portion is shown enlarged, so this does not decrease the amount of time required for camera input.

Note: DAP processing is available only on FQ2-S3-series Sensors.

Megapixel CMOS Sensor 4 Times the Pixels

1,000 Times the Display Resolution

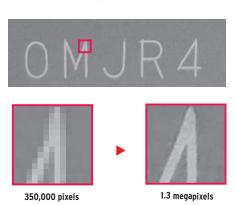

(Comparisons to previous OMRON models)

Precision 1.3 Megapixel Camera

Would you like a little more positioning accuracy? Do you need a wider field of view?

We hear you, and that is why we have greatly improved the resolution of our camera.

The 1.3 megapixels maintain precision and accuracy while also enabling a wider field of view.

760,000 Pixels Monochrome

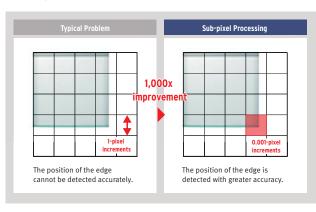

Sensor with C-mount

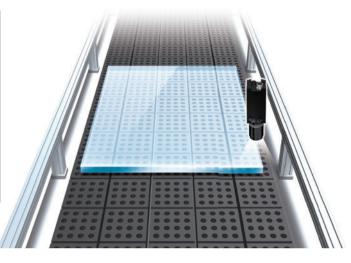

Integrated Sensor

*.The number of pixels of FQ2-S1/S2 is 350,000.

Sub-pixel Processing

Previously, position information could only be output on a per-pixel basis, but now you can output at a resolution even higher than the number of available pixels. This provides finer measurement values for travel distances and helps to improve positioning accuracy.

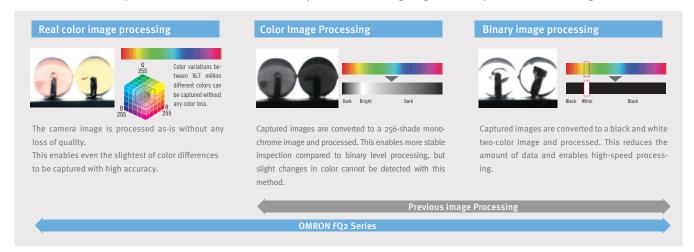

Three Key Technologies for Crystal Clear Images

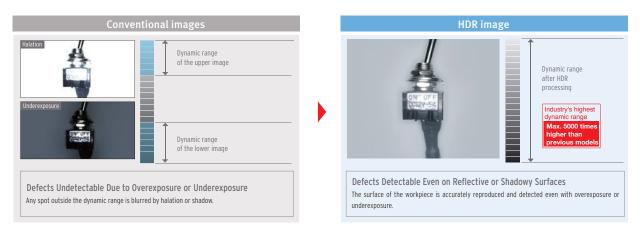

Real-color Sensing

Real-color processing is an image processing technology that performs high-speed processing of full-color images with a total of 16.7 million colors (256 tones per RGB channel). This means that image processing can be performed with the same color information that is visible to the human eye, and stable measurements can be performed under lighting that closely resembles natural light.

HDR Sensing

High dynamic range minimizes the effects of lighting such as halation and allows highly precise inspections.

Polarizing Filter + High-power Lighting

Lighting is required for stable image inspection, but shiny surfaces can reflect light, resulting in incorrect judgements. You can use a polarizing filter to reduce specular reflection, but the entire image will be darker, which can result in insufficient image contrast. The FQ2 Series is equipped with OMRON's own high-power lighting DR optical system for effective use of LED power. This system provides sufficient lighting for inspection even when the enclosed polarizing filter is used.

Useful Onsite Utilities

Real-time Threshold Adjustment

The FQ2 smart camera allows fast and easy real-time parameter adjustment. Eliminating the need to stop the machine for fine tuning and optimisation of settings, resulting in zero machine downtime.

Judgement conditions can be adjusted on the Touch Finder.

180° Inverted Image Display

Invert images by 180° when an image can only be taken in the incorrect orientation due to the position that the Sensor was mounted in.

Inspection History Logging

Historical results logging is very useful for testing a new line. Samples are fed down the line and inspection results are logged. The logged data can be checked on a time scale in graph form and used to adjust judgement conditions. File Logging is convenient during operation. Large inspection history can be saved on SD cards and used later for traceability.

Password Protection

A password can be set to prevent changes to settings during operation by restricting the ability to change from Run Mode to Setup Mode.

Auto Detection

When multiple sensors are connected to the touch finder, the display automatically switches to the image of the sensor which has produced an NG result. This allows dynamic visualisation of reject conditions.

Note. When 32 sensors are connected, the most recent NG sensor of 8 sensors selected for display is displayed.

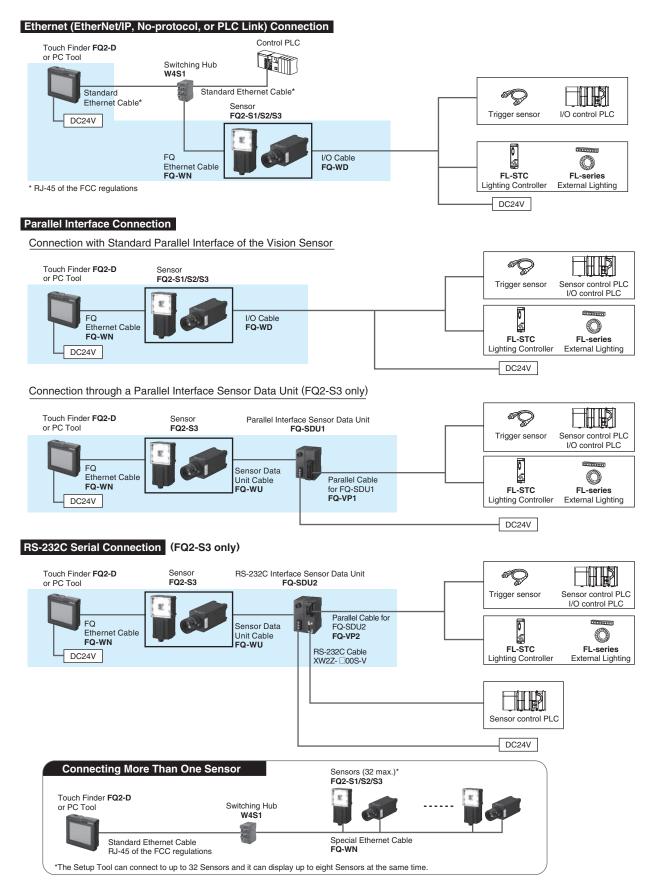

Shortcuts

Shortcuts to Setup Menu items that are changed frequently can be added to the Run Mode display.

This enables the user to quickly perform adjustments when a problem occurs during operation.

System Configuration

Note: If you register as a member after purchasing a Sensor, you can download free setup software that runs on a PC and can be used in place of Touch Finder. Refer to the member registration sheet for details.

Battery

Item Model	FQ-BAT1
Battery type	Secondary lithium ion battery
Nominal capacity	1,800 mAh
Rated voltage	3.7 V
Ambient temperature range	Operating: 0 to 40°C Storage: -25 to 65°C (with no icing or condensation)
Ambient humidity range	Operating and storage: 35% to 85% (with no condensation)
Charging method	Charged in Touch Finder (FQ2-D31). AC adapter (FQ-AC□) is required.
Charging time (See note 1.)	2 h
Usage time (See note 1.)	1.5 h
Battery backup life (See note 2.)	300 charging cycles
Weight	50 g max.

- Note: 1. This value is only a guideline. No guarantee is implied. The value will be affected by operating conditions
 - 2. This is a guideline for the time required for the capacity of the Battery to be reduced to 60% of the initial capacity. No guarantee is implied. The value will be affected by the operating environment and operating conditions.

System Requirements for PC tool for FQ

The following Personal Computer system is required to use the software.

os	Microsoft Windows XP Home Edition/Professional SP2 or higher (32-bit/64-bit version) Microsoft Windows 7 Home Premium or higher (32-bit/64-bit version)	
CPU	Core 2 Duo 1.06 GHz or the equivalent or higher	
RAM	1GB min.	
HDD	500 MB min. available space (See note)	
Monitor	1,024 × 768 dots min.	

Note: Available space is also required separately for data logging.

Windows is registered trademarks of Microsoft Corporation in the USA and other countries.

READ AND UNDERSTAND THIS CATALOG

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

SUITABILITY FOR USE

THE PRODUCTS CONTAINED IN THIS CATALOG ARE NOT SAFETY RATED. THEY ARE NOT DESIGNED OR RATED FOR ENSURING SAFETY OF PERSONS, AND SHOULD NOT BE RELIED UPON AS A SAFETY COMPONENT OR PROTECTIVE DEVICE FOR SUCH PURPOSES. Please refer to separate catalogs for OMRON's safety rated products.

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- · Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PERFORMANCE DATA

Performance data given in this document is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

COPYRIGHT AND COPY PERMISSION

This document shall not be copied for sales or promotions without permission.

This document is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this document in any manner, for any other purpose. If copying or transmitting this document to another, please copy or transmit it in its entirety.

LED Safety

⚠ WARNING

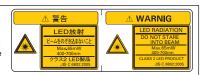

The Sensor emits visible light, which may adversely affect the eyes in rare instances

Do not look directly into the light emitted from the Sensor. When the subject is a specular reflective object, protect your eyes from reflected light.

Displaying LED Labels

Attached the enclosed warning label in a readily visible location near the product, such as on the cable.

Vision Series Lineup

The lineup covers everything from low-cost Smart Cameras to highly customizable PC-based image processing systems.

Choose the best combination for your budget and needs.

Smart Camera

These integrated cameras provide a cost effective solution for a wide range of vision applications.

Vision System

This package-type Vision System provides both high-end inspection capabilities and excellent processing speed.

Functionality and processing speed

PC Vision System

An easily customizable, PC-based image processing system.

Note: Do not use this document to operate the Unit.
